(57) Abstract:

PROBLEM TO BE SOLVED: To obtain a new chroman-based compound capable of producing a heat-sensitive recording material excellent in light resistance of an image part and a non-image part and useful as a coupler of a heat-sensitive recording material by utilizing the compound as the coupler of the heat-sensitive recording material.

SOLUTION: This compound is represented by formula I [R is an aminocarbonyl, an acylamino, an aminocarboxy, an aminocarbamoyl, a sulfonamide, etc.; R¹ to R³ are each H, a halogen, a (substituted) alkyl, an alkoxy, etc.; Y is a divalent group; Z is chroman or an atomic group necessary to form the chroman ring, e.g. 2,5,7,8-tetramethyl-2-hexadesyl-6-[5-(N,N-dibutylaminocarbonyl)pentyl]oxy]chroman. The compound of formula I is obtained by reacting a compound of formula II with a compound of the formula R-Y-X (X is Cl, Br or I) in the presence of a base.
